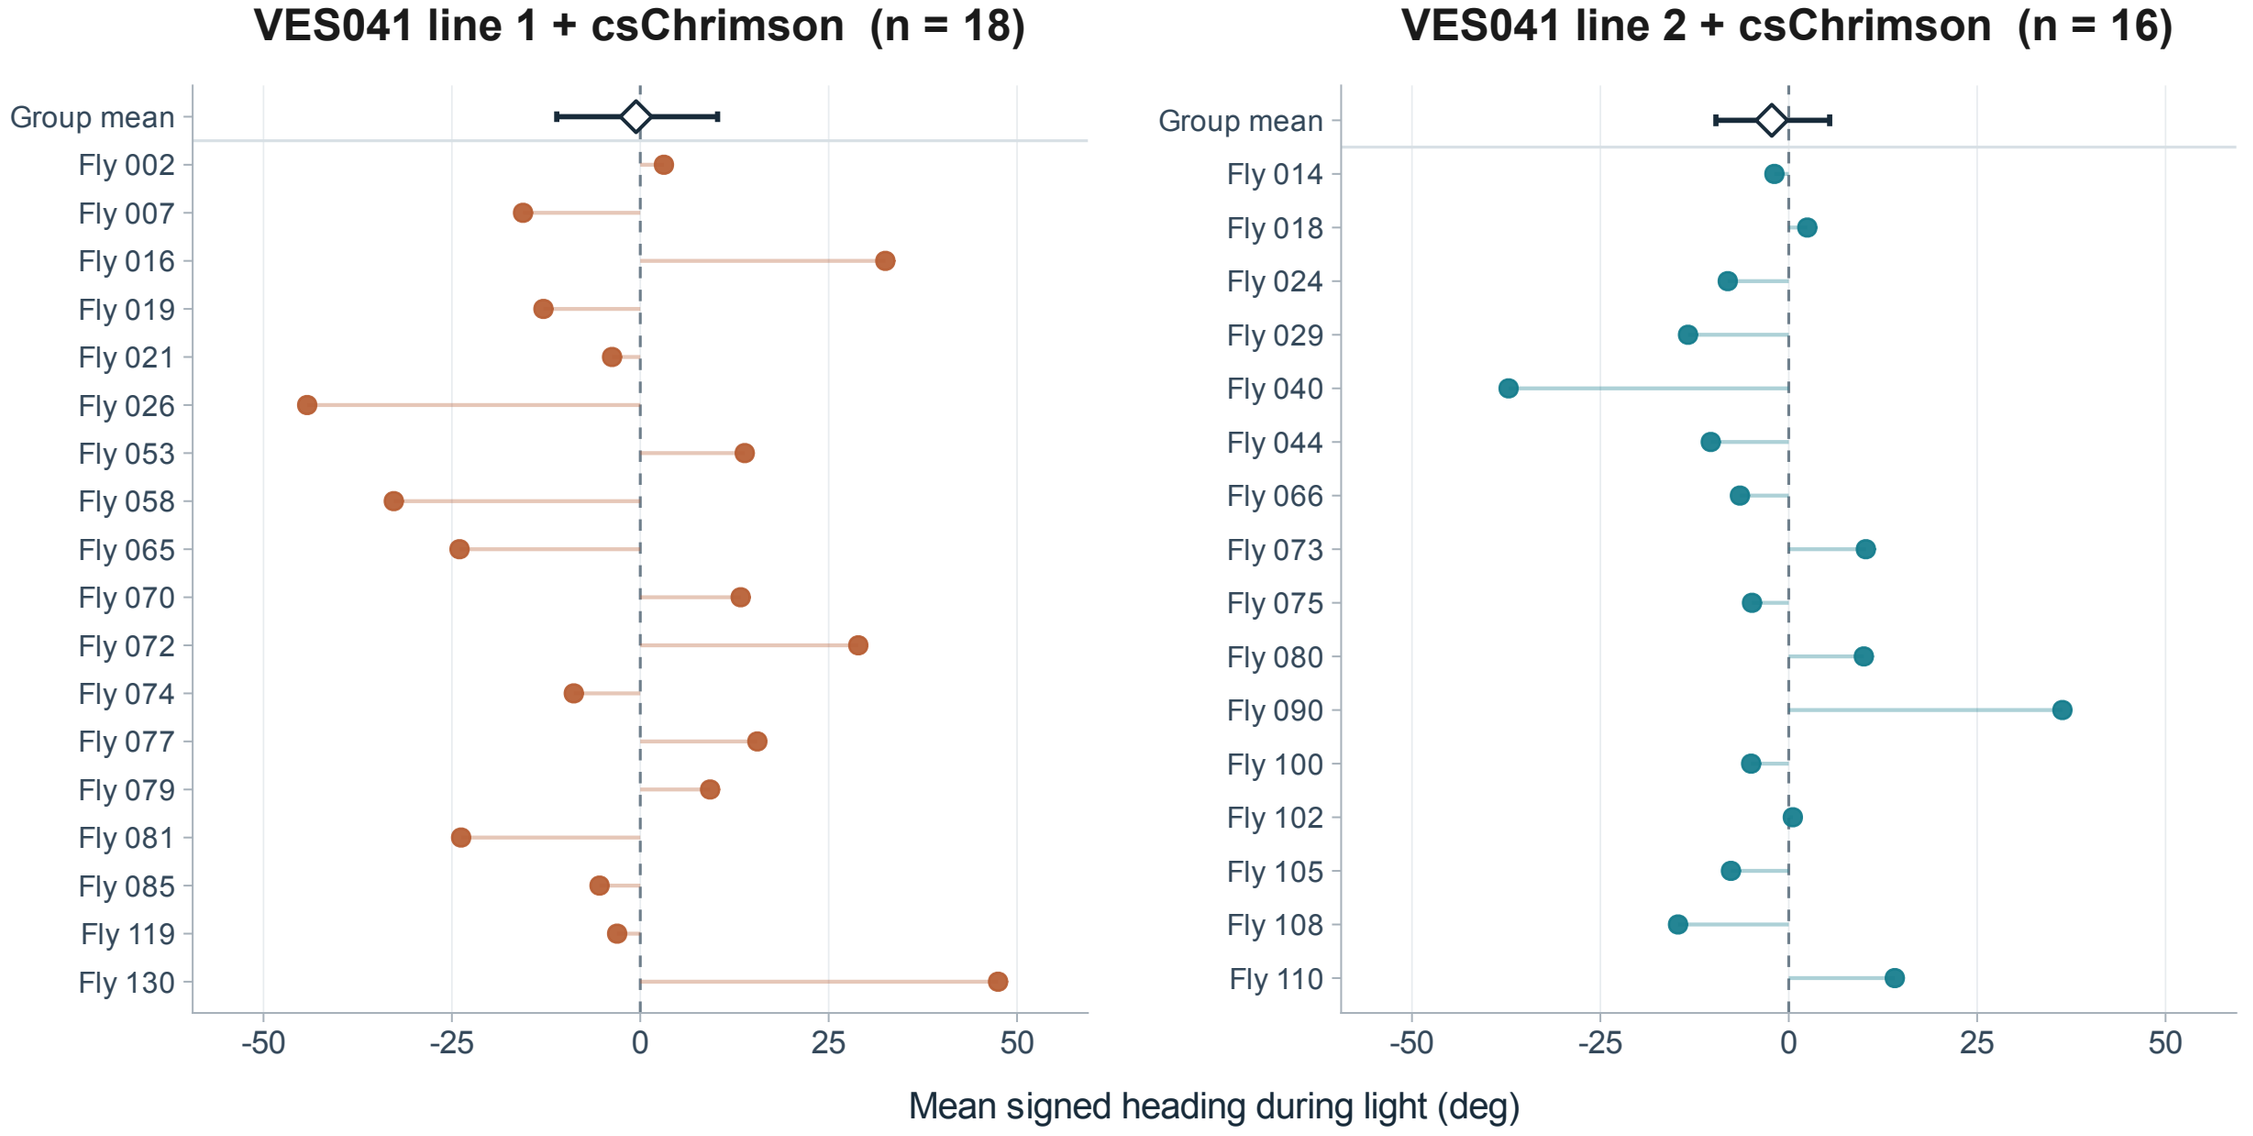
# Turn direction varies between individual VES041 flies

First 1 s of csChrimson stimulation. Each colored dot is one fly's mean across 80 pulses.



Negative = left; positive = right, following the lab analysis-code convention.

Black diamonds: genotype means with 95% bootstrap intervals across flies.

Pooled 34 flies: mean -1.36 deg, 95% CI -7.92 to 5.36 deg; two-sided sign-flip p = 0.696.
